

## PRO-FIT™ BULLNOSE

The Pro-Fit™ Bullnose is designed to increase your paper carrier winding performance on modern high-speed winders and spinning frames that require a perfect fit.

The nose of the cone is shaped to match the angle of the winder adapter, thereby increasing the contact surface between adapter and cone. The custom shape of the cone results in more efficient winding and a finished yarn package of higher quality.

Benefits of the Pro-Fit™ Bullnose include:

- **Fully Concentric**— the secure fit ensures a perfect alignment with the adapter
- **Immediate Response**— the larger contact area allows for quicker braking and acceleration
- **Stronger Nose**— the increased strength of up to 40% preserves integrity of the yarn package
- **Reduced Vibration**— the snug fit delivers better package formation
- **Smooth Off-Wind**— the advanced construction of the nose prevents nose drag
